

Introducing THERMAL CONTROL MEMBRANE (TCM) Building Insulation

- * The ultimate home insulation product
- * Holds heat in during winter
- * Keeps heat out during the summer
- * Cuts Energy Costs
- * [Easy to install](#)
- * Increases Comfort
- * Lasts forever
- * Money back Guarantee

Thermal Control Membrane is a multi-layered, thin film material that is very effective at controlling heat flow. This means infrared heat, the most basic type of heat, changes direction and goes back where it came from. TCM is a proven approach at increasing comfort and reducing energy consumption.

TCM is the ultimate wall insulation

If your new home or addition does not look like this before the exterior is applied, you will be paying too much for your comfort. The TCM6 product shown here wrapping the walls and roof of this new home allowed for a 50%

reduction in the sizing of the heat pumps (7 tons instead of 14)

For cold climates TCM-6 should be installed just behind the sheet rock as a vapor barrier and an effective heat barrier.
